

Imagine using your ViCiDial dialer without the need to install, configure and constantly deal with softphones such as Zoiper, X-lite, Eyebeam and similar.

As a custom service, ProDialers can integrate a **WebRTC** phone within your agent UI, enabling audio (and even video, screen sharing) stream within the browser and UI itself, eliminating the need for installation and setup of any softphone software.

Contact us today for more information.
