

Monitor / Barge Problem on GoAutoDial 3.3 / ViCiDial

Written by ProDialers

GoAutoDial CE 3.3 monitoring and barge function do not work *out of the box*. To fix this, log in via SSH and run the following commands:

For CentOS distros:

```
yum install glibc.i686 -y
```

For Ubuntu distros:

```
apt-get install libc6-i386
```

Then run:

```
usr/share/astguiclient/ip_replay/relay_control start
```

Voila!
