

## Searching for a string in Asterisk

Written by ProDialers

---

If you wish to search for a certain string in Asterisk only (Example: only show carrier congestion), launch the Asterisk CLI along with the grep command, i.e.:

```
asterisk -rvvvvv | egrep -i "string"
```

Example (showing only congestion notices / errors)

```
asterisk -rvvvvv | egrep -i "congested"
```
