

Removing a valid IP from IPTables or blacklisting a hacker IP

Written by ProDialers

To remove a valid IP address from the iptables, log in via SSH and enter the following commands:

```
iptables-save > tmp_file
```

```
nano tmp_file
```

Remove / delete the line containing the valid IP address

```
iptables-restore < tmp_file & iptables-save
```

To block an IP (example 111.222.333.444), please use the following command:

```
iptables -A INPUT -s 111.222.333.444 -j DROP & iptables-save
```
